EDUCATION

Graphic Era Hill University

Bachelor of Technology in Computer Science

Bhimtal, Uttarakhand

Sep 2022 – June 2026

SKILLS

- **Languages:** C, C++, Java, Python, JavaScript.
- **Core Subjects:** Data Structures & Algorithms, OOPs, DBMS, OS, Computer Networks.
- **Tools & Platforms:** GitHub, Docker, VS Code, Jupyter Notebook, Postman.
- **Soft Skills:** Problem Solving, Team Collaboration, Leadership, Public Speaking, Time Management.

PROJECTS:

Automated Number Plate Recognition | Python, OpenCV, EasyOCR, Twilio API

[\(Link\)](#)

- Built an Automated Number Plate Recognition system which detect and reads number plates.
- Used **Haar Cascade Algorithm** to locate plates accurately, even under different lighting and angles.
- Applied **OCR** to extract and recognize alphanumeric text from detected plates. Created a **notification feature** that sends alerts automatically when a registered vehicle is recognized.

RAG-Based Document Intelligence System | Python, LangChain, FAISS, OpenAI API, Streamlit

[\(Link\)](#)

- Developed a system where users upload PDFs and ask questions in plain language — no manual searching needed.
- Implemented **FAISS vector store** with OpenAI embeddings so the system finds the right answer from the document, not just keyword matches.
- Handled 50+ page documents in under 10 seconds using a chunking pipeline, ~40% faster than reading sequentially.

Sales Forecasting Using Predictive Analytics | Python, Django, Scikit-learn, Pandas, NumPy

[\(Link\)](#)

- Designed a machine learning-based system to predict future sales using past data and business trends.
- Applied **Linear Regression and Decision Tree** algorithms to handle both linear and seasonal sales patterns.
- Achieved around **80% prediction accuracy** across various sales scenarios after fine-tuning models.

Multiple Disease Prediction System | Python, Django, TensorFlow, Scikit-learn

[\(Link\)](#)

- Delivered a web-based interface using Django for early disease prediction, enhancing accessibility by 30%.
- Executed preprocessing steps such as normalization, feature engineering, and missing data imputation, enhancing model accuracy by 15%.
- Enabled real-time predictions with **<2 sec latency**, improving user experience.

Certifications

- **Udemy** - Comprehensive Machine Learning with Python. [\(Link\)](#)
- **AWS Cloud Practitioner Essentials** - AWS Skill Builder. [\(Link\)](#)
- **Udemy** - End-to-End Programming with C, C++. [\(Link\)](#)

Extra-Curricular Activities

- **Amazon ML Summer School:** Mentee at Amazon's ML Summer School 2025.
- Participated in **coding and workshops**, gaining practical exposure to real-world applications.
